Professional Summary

Final-year Information Technology student (Department Gold Medalist) with software engineering experience at Oracle building scalable backend services, REST APIs, and AI agents. Skilled in production-grade RAG pipelines, agentic LLM systems, and distributed processing using Python, Java, FastAPI, and LangChain, with 400+ DSA problems solved. Seeking software engineering and AI/ML roles to build reliable, high-impact systems.

Education

Vasavi College of Engineering — BE in Information Technology | GPA: 9.55/10.0

2022 – 2026

Experience

Oracle — Associate Software Engineer Intern

Jan 2026 – Jul 2026

- Engineered an SMS retargeting service with **batch processing**, orchestrating multiple worker processes over a shared task queue with **synchronization locks** to eliminate race conditions, and integrated rule-based targeting and observability for scalable campaign delivery to thousands of customers per run.
- Designed and shipped a Smart Offers **AI Agent** that analyzes customer purchase behavior to generate personalized e-commerce offer recommendations, automating a previously manual campaign-selection workflow.
- Developed **REST APIs** with caching, retry logic, and structured logging, cutting redundant downstream calls and accelerating incident debugging turnaround for the team.

Projects

Agentic Legal RAG (FastAPI, LangGraph, Pinecone) GitHub

- Architected a **agentic RAG** pipeline for legal research, combining Legal-BERT document segmentation with hybrid retrieval and two-stage reranking to improve answer relevance on statutory queries.
- Designed a **custom hybrid retriever** that queries dense and sparse **Pinecone** indexes in parallel, then merges and reranks candidates with a cross-encoder model, boosting retrieval precision over single-index search.

IT Incident Summarizer (Flask, RAG, FAISS, ML) GitHub

- Built a log summarization tool for SREs, integrating a **RAG** pipeline that grounds **root-cause predictions** in retrieved historical incident context to reduce manual triage effort.
- Implemented an **adaptive online learning model** (River) with continuous feedback integration, **outperforming XGBoost and Decision Tree baselines** by learning from new incident patterns incrementally without full retraining.

DubFlow (React.js, Node.js, Express, gTTS, FFmpeg) GitHub

- Developed a multilingual YouTube dubbing tool with Node.js and FFmpeg, supporting **32+ languages** through a distributed audio processing pipeline.
- Engineered intelligent fallback mechanisms for missing transcripts and translation failures, improving end-to-end pipeline reliability and reducing failed dubbing jobs.

Skills

Languages: Java, Python, C++, SQL, JavaScript

AI/ML & Backend: FastAPI, Spring Boot, Node.js, LangChain, LangGraph, RAG, REST APIs

Databases: Oracle, PostgreSQL, MySQL, Pinecone, FAISS

DevOps & Tools: Linux, Git, Docker, AWS (EC2, S3), Agile, Jira

Coursework: Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, DBMS

Roles & Responsibilities

Head of Web Development – DSAC IT Club, Vasavi College of Engineering

- Led web development sessions, interviewed and mentored junior members, and drove design and debugging of club projects.
- Developed and deployed the official ACUMENIT tech fest website end-to-end, serving the entire student body during the fest.

Certifications

- Coursera:** Build AI Agents using MCP by IBM
- OCI:** OCI AI Foundations Associate
- NPTEL:** Programming in Java (Top 1%), The Joy of Computing using Python (Top 1%)
- CCNAv7:** Introduction to Networks

Achievements

- Awarded the **Gold Medal** in the **Information Technology Department** for outstanding academic performance.
- Secured **Runner-up** in the **Oracle Retail Business Unit Internal Hackathon** among competing intern teams.
- Resolved bugs in **40,000+ star open-source repositories**, eliminating unnecessary build and deployment executions.
- Developed and published a **Chrome Extension** that automates job application tracking, eliminating manual data entry.
- Secured **3rd place among 1,600 students** in **Codezee**, a coding contest by the VCE IT Department.
- CodeChef 2-Star**; solved **400+ problems** on LeetCode and CodeChef – **CodeChef Profile**.
